NIETZSCHE

And Other Exponents of Individualism

By PAUL CARUS

**Illustrated with Portraits of Nietzsche. Cloth,
\$1.25**

A well-balanced presentation of Nietzsche's philosophy. Principal Contents: Anti-Scientific Tendencies; Extreme Nominalism; Ego Sovereignty; Philosophy of Originality; and the Principle of Valuation, including a review of Nietzsche's predecessors and disciples.

"A reliable introduction to a study of the philosophy of Individualism."

The appearance of a philosopher like Nietzsche is a symptom of the times. He is one representative among several others of an anti-scientific tendency. The author here characterizes him as a poet rather than a thinker, as a leader and an exponent of certain unruly and immature minds. Though his philosophy is severely criticized, though it is weighed and found wanting, his personality is described not without sympathy and with an appreciation of his genius. His predecessor, Max Stirner, and other kindred spirits less known than Nietzsche are also introduced, and if the reader adopts the author's views he will condemn the tendencies and thoughts of these erratic philosophers, but at the same time appreciate their aspirations and love them in their very errors. The fundamental error of them all is an extreme individualism which regards every single person as an absolute autonomous sovereign being, while a consideration of the origin of personality proves them to have originated with, in, and under the influence of the social surroundings of communities from which they can not be separated and of which they are and will forever remain parts.

In this relation of the individual to society lie the roots of ethics. The individual can not cut himself loose from his social surroundings without doing harm to himself, and the rules which this interrelation impose upon the several members of society constitute an obligation which we call duty.
